

THE REHABILITATION OF TAXIWAYS "H", "B" AND "F" at TRENTON-MERCER AIRPORT

Why are we Rehabilitating Taxiways "H", "B" and "F" at TTN?

The taxiways are currently in poor condition and reconstruction is needed. The current PCI (Pavement Classification Index, which rates the condition of existing pavement on a 100 scale with pavements between 70 and 100 being considered "Good", 70 – 55 being "Fair" and 0 – 55 as "Poor") is estimated to be from 40 – 55. The existing lighting is over 15 years old (direct buried cable and some stake mounted lights) and is nearing the end of its service life cycle.

Project status as of September 5, 2012:

- The FAA issued a Design Grant to TTN in August of 2011.
- The NJDOT issued a matching Design Grant and Mercer County gave C&S Engineers, Inc. a NTP in August of 2012.
- Currently the project area will be surveyed and soil tests will be conducted.
- Once these results are received the project will be designed for an anticipated first Phase Bid of May 2013.

When Will the Project Start:

- Design of the Project has Started and the First Bid Phase should be complete in time for a May of 2013 bid.
- Construction of the First Phase of the Rehabilitation of Taxiways "H", "B" and "F" Should Begin in the Spring of 2014.

How Long will the Project Take:

- Construction of the first Phase of the Project should take 120 Working Days.
